### ➤ Overview

As a result of the Royal Commission into the tragic and devastating Victorian Black Saturday bushfires of Feb 2009, the Country Fire Authority and the Department of Sustainability and Environment agreed to coordinate and standardize on an upgrade to their rural and regional Incident Management Systems.

### ➤ Solution

The Omnitronics 950 Radio Management System has an enviable track record as a robust, reliable and user friendly Operator console. The Series 2 system met the requirements of both the CFA and DSE allowing both organizations to standardize on the same Operator console interface. This ensured Operators from both organizations could be deployed to any Incident Management Centre and understand the operation of the console system.

### ➤ Conclusion

During times of extreme emergency such as Black Saturday the communications must operate in a seamless, clear and reliable manner. Communication support to those attending the emergency response is critical.
