

PRESS RELEASE

DX-Altus Launches at IWCE with Resounding Interest

28th March, 2013, Jacksonville, FL, USA

Omnitronics, a world leader in mission critical dispatch management systems, officially launched the DX-Altus Digital Radio Management System at IWCE in an exclusive event.

The DX-Altus is the latest in a long line of reliable and efficient radio management solutions. It has been designed for Digital Radio but also supports Analogue protocols for those organizations that want system wide flexibility. It has been designed to be vendor and radio independent and therefore can support a range of conventional and trunked digital protocols.

Those who test drove the software were particularly impressed with the flexibility and configurability of the companion dispatch software, Alto. They were further interested with the great value provided with the suite of features available within the entry level solution.

“The DX-Altus is the culmination of an intensive R&D effort to deliver a cost affordable radio dispatch system that will get the best of emerging radio technologies,” says John Florenca, President of Omnitronics Inc. USA.

“DX-Altus is based on proven technology and Omnitronics’ extensive experience with Radio over IP dispatch solutions. The GUI, Alto, is designed for simple and intuitive operation, whilst the overall product provides customers with solutions for interoperability and managed growth and expansion”

Visitors were also privy to a sneak peak of the upcoming digital soft console, RediTALK, seeing the pathway being paved towards a full suite of digital dispatch solutions.
