

## Application Note Emergency Management

# P25 Emergency Management in the DX-Altus for Mine Site

### Customer Profile

- Coal Mining Operator

### Application

- Emergency & Blast Tones over P25

### Business Benefits

- Improves Safety and Emergency Response Times
- Simple Setup
- Simple Operation from both the Radio and Dispatcher
- Customisable
- Highly Reliable

### Products Used

- DX-Altus
- Alto
- DRG100

### Overview

Anglo American's Capcoal coal mining operation in the Queensland Bowen Basin, installed the DX-Altus Digital Radio Management System for managing their mine radio communications including Emergency and Blast Warnings over their P25 Radio System.

### The Challenge

Capcoal required unique and customisable blast and emergency tones to be transmitted over a P25 vocoded system that could quickly and easily be enacted by radio users or dispatch operators.

### The Solution

Both Emergency and Blast Tones are configured from the DX-Altus' central server which can be easily accessed through a web browser. The tones were customised to suit Capcoal's required tones by changing frequencies, timings, repetition and volumes as well as sending Status Messages.

A radio user can then enact the Emergency or Blast tones from the Radio Menu or Operators can enact it from Alto, ensuring optimum response times. Operators will then PTT directly to the pre-configured Emergency or Blast Channels or Groups.

### Conclusion

The DX-Altus' Emergency Management module has provided Capcoal with an efficient and customisable solution to help ensure the safety of their workforce over P25 radios.

Thanks to Nixon Communications for the excellent work they did integrating the DX-Altus Radio Management System in to the Capcoal P25 Radio System.
